

Crowdsourced Security Testing for Our Nation’s Digital Assets

The U.S. Government protects our nation’s most sensitive IT assets, and as cyber incidents increase every year, government agencies need security solutions that can keep pace with the evolving adversarial landscape. Synack’s Hacker-Powered Security Intelligence solution offers government agencies an innovative approach to penetration testing. Our proprietary vulnerability intelligence platform, Hydra, guides our crowd of the world’s most skilled, vetted ethical hackers towards vulnerabilities that often go undetected by legacy solutions. Our crowd, the Synack Red Team (SRT), mimics adversaries’ attacks on these vulnerabilities and provides actionable reports on their exploitability and suggested fixes. All SRT traffic is routed through our secure gateway, providing customers with complete visibility and control. The result is comprehensive testing across complex IT environments and real-time vulnerability intelligence from an adversarial perspective.

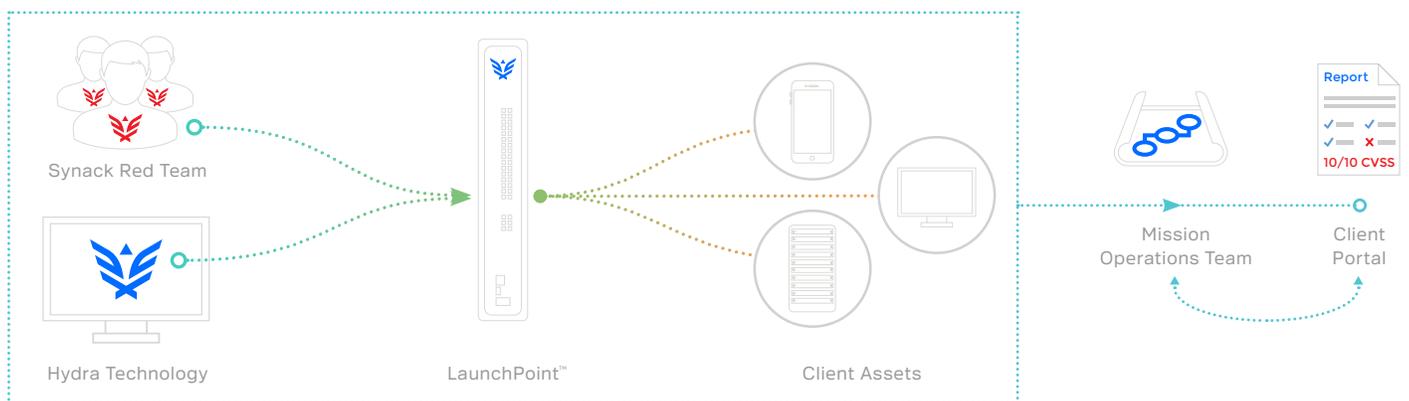

Unlike traditional penetration tests and open bug bounty programs, Synack offers the benefits of a diverse, scalable crowd through a private, managed approach. Synack’s solution minimizes execution risk and maximizes testing integrity, transparency, and results.

The Synack Difference

Government agencies choose Synack due to our:

- **Private, managed** approach
- **Most rigorous researcher vetting** in the industry
- **Tracking, visibility, and control** of all researcher activities
- **Government-tailored** researcher segmentation and client-specific researcher vetting
- **Robust triage services** that only draw clients’ attention to vetted, high quality vulnerabilities
- **Industry-leading results**, including highest signal-to-noise ratio, average bounty sizes

Synack Hacker-Powered Security Intelligence Platform Workflow

Synack Red Team (SRT)	Our SRT is comprised of highly qualified security researchers, vetted for trust and skill.
Hydra	Synack built our proprietary, automated vulnerability intelligence platform to guide the SRT to vulnerabilities and maximize researcher efficiency and impact.
LaunchPoint®	Synack’s proprietary full packet capture technology monitors and audits all SRT challenge activities.
Mission Operations Team	Synack’s internal team of experienced specialists coordinates all engagements and triages every submitted vulnerability to focus client attention on only the most mission-critical.
Client Vulnerability Management Portal	Synack’s cloud-based solution is deployed to clients instantly with no on-prem installation. The client Vulnerability Management Portal provides actionable researcher coverage maps, real-time discovery data, detailed vulnerability reports, and One-Touch Assessment Pause feature to instantly halt researcher traffic.

Government's Preferred Vendor

<10% SRT Applicants Accepted	100% SRT Vetted & Tracked	>95% Signal-to-Noise Ratio	<1 hr. Support Response <24 hrs. Triage Response <72 hrs. Patch Verification
---	-------------------------------------	---	---

Government agencies have chosen Synack to test their sensitive IT assets because of our results and our private, managed model. Synack accepts <10% of SRT applicants and proudly leads the industry with the highest signal-to-noise ratio and average bounty reward sizes. We guarantee our clients full visibility and control over researcher activities, all of which are tracked by LaunchPoint® and our Mission Operations Team at all times.

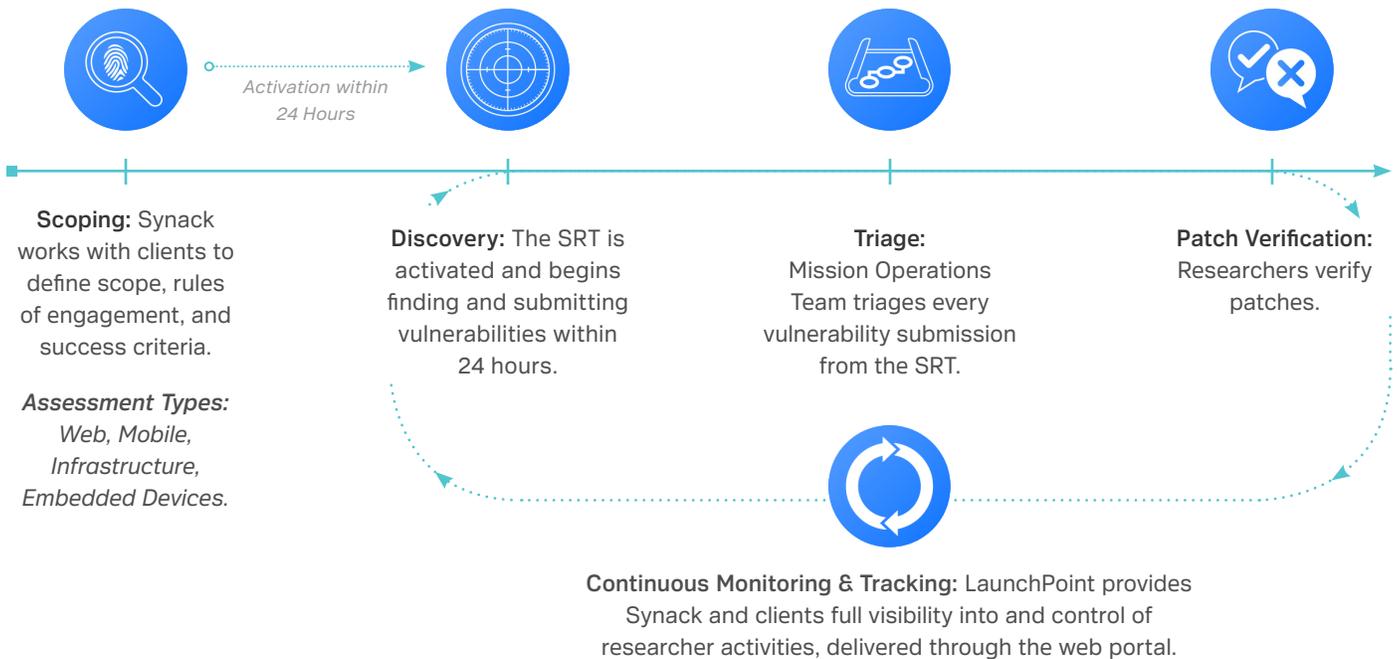

All candidates for SRT membership undergo our mandatory 5-step vetting process*, including Federal criminal background checks and Know Your Customer (KYC)-compliant identity verification. For additional vetting, Synack's Tailored Researcher Requirement Program (TRRP) addresses client-specific requirements, including geography, clearance level, skillset, employment background, and certifications.

Working with Synack

Our Security as a Service solution is cloud-based and can be rapidly activated within 24 hours, with no delivery or installation of on-site devices. Throughout the engagement, the Synack Mission Operations Team provides a constant point of contact for clients, and all continuous monitoring data from the SRT, Hydra, and LaunchPoint is readily available through the client web portal.
